

Seamless Implementation

With the Sensinel™ CPM System and our dedicated staff, your team will experience a customized seamless implementation process.

STEP 1 Kick-off call

Sensinel by Analog Devices™ staff will meet with your team to align on resources and develop a deployment schedule.

STEP 2 Platform setup

ADI sets up a Sensinel platform account and assigns permissions to the clinical dashboard, software, and mobile application.

STEP 3 Training and go-live

Staff training and ongoing go-live support of device use, patient selection criteria, workflows, and patient deployment.

“ADI ensured that I was well-prepared for my responsibilities. The training session was thorough and organized, led by a knowledgeable trainer, and complemented by informative materials. Every question I had was met with clear and comprehensive answers. The solution demonstration provided a valuable hands-on opportunity, leaving me not only at ease with the equipment but also ready to effectively convey that knowledge to subjects.”
